

# INDIA

# COMPLETE ENCYCLOPEDIA

100-Page Educational Reference Book

Geography • States • Union Territories • History • Constitution • Economy • Science  
• Space • Defence • Environment • Culture • Sports • Tourism

# Contents & Study Guide

This is the corrected edition. It contains exactly 100 pages: 2 front-matter pages and 98 different content pages. The repeated appendix/filler material from the previous version has been removed.

## Coverage

- All 28 states and all 8 Union Territories
- Physical and human geography
- Ancient, medieval and modern history
- Freedom movement and Republic
- Constitution, Parliament, executive, judiciary and elections
- GDP, inflation, banking, agriculture, industry and infrastructure
- ISRO, Chandrayaan, Mangalyaan, Aditya-L1, AI and Indian scientists
- Army, Navy, Air Force, DRDO and Coast Guard
- Biodiversity and climate change

## How to use it

For a project, add maps, photographs and a bibliography. For viva preparation, answer each topic using: definition → Indian example → importance → challenge.

# 01 — India at a Glance

India is a South Asian country with extraordinary geographic, linguistic, cultural and economic diversity.

## Identity

India is a sovereign democratic republic organised as a Union of States. New Delhi is the national capital and the Indian rupee is the currency.

## Scale

The country contains mountains, plains, plateau, desert, long coasts and island territories.

## Society

Hundreds of languages and many religious and cultural traditions coexist across urban and rural regions.

## Study idea

India becomes easier to understand when geography, history, society and economy are studied together.

**Quick revision: Identity • Scale • Society • Study idea**

## 02 — National Symbols

National symbols provide a compact introduction to India's national identity.

### Flag

The Tiranga has saffron, white and green bands with the Ashoka Chakra in the centre.

### Emblem

The State Emblem is based on the Lion Capital of Ashoka and carries Satyameva Jayate.

### Anthem and song

Jana Gana Mana is the national anthem; Vande Mataram is the national song.

### Natural symbols

The Bengal tiger, Indian peafowl, lotus and banyan are among the best-known national symbols.

**Quick revision: Flag • Emblem • Anthem and song • Natural symbols**

## 03 — 4. Location & Neighbours

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

India shares land borders with Pakistan, China, Nepal, Bhutan, Bangladesh and Myanmar. Maritime neighbours and nearby island states include Sri Lanka and the Maldives.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 04 — 5. Physical Divisions

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

The Himalayan region, Northern Plains, Peninsular Plateau, Indian Desert, Coastal Plains and Islands form broad physical divisions. Each has different geology, climate, soils and ecosystems.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 05 — 6. Himalayas

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

The Himalayas influence monsoon circulation, river systems, biodiversity and settlement. Major ranges include the Greater Himalaya, Lesser Himalaya and Shiwalik ranges.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 06 — 7. Northern Plains

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Built largely from river sediments, the plains of the Ganga, Yamuna and Brahmaputra systems contain extensive agricultural land and large urban centres.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 07 — 8. Peninsular Plateau

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

An ancient landmass with the Deccan Plateau, Western Ghats, Eastern Ghats and mineral-rich central regions.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 08 — 9. Desert & Arid India

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

The Thar Desert is centred in Rajasthan and extends toward Pakistan. Arid regions require specialised water management and support distinctive pastoral and desert ecosystems.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 09 — 10. Coastal India

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

The west coast includes Konkan and Malabar stretches; the east coast includes Coromandel and northern coastal plains. Ports, fisheries, tourism and agriculture are important.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 10 — 11. Islands

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Andaman and Nicobar Islands lie in the Bay of Bengal; Lakshadweep lies in the Arabian Sea. Both have distinctive marine and terrestrial ecosystems.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 11 — 12. Major Rivers

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Ganga, Yamuna, Brahmaputra, Godavari, Krishna, Narmada, Tapi, Mahanadi and Kaveri are among India's major river systems.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 12 — 13. Lakes & Wetlands

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Important wetland and lake systems include Wular, Dal, Chilika, Loktak, Sambhar and Vembanad. Wetlands support fisheries, migratory birds, flood regulation and livelihoods.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 13 — 14. Climate

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

India's climate is strongly influenced by the southwest monsoon, Himalayas, latitude, altitude and surrounding seas. Regional climates range from alpine to tropical and arid.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 14 — 15. Soils

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Major soil groups include alluvial, black, red, laterite, arid and mountain soils. Soil type affects crop selection, irrigation and land management.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 15 — 16. Mountains & Peaks

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Kangchenjunga is India's highest mountain peak within the country's territory; the Himalayas contain many major high-altitude ranges and passes.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 16 — 17. Waterfalls

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

Jog Falls, Dudhsagar, Athirappilly, Hogenakkal and Chitrakote are examples of well-known Indian waterfalls.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 17 — 18. Natural Regions

India's physical geography is closely connected to climate, agriculture, transport, settlement and biodiversity.

### Core explanation

India contains deserts, mangroves, tropical rainforests, grasslands, alpine ecosystems, coral reefs and riverine habitats.

### Human connection

The physical feature affects where people live, what they grow, how they travel or which industries develop.

### Environmental angle

Land, water and ecosystems need management because development can change natural systems.

### Revision

On a map, locate the feature and then remember one economic use and one environmental challenge.

**Quick revision: Core explanation • Human connection • Environmental angle • Revision**

## 18 — State — Andhra Pradesh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Amaravati. Major language(s): Telugu.

### Geography and identity

Coastal and peninsular state; known for agriculture, aquaculture, long coastline, Tirupati and rich Telugu culture.

### Important places

Visakhapatnam, Tirupati, Araku Valley

### Economy

Rice, chilli, aquaculture, pharmaceuticals, ports

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 19 — State — Arunachal Pradesh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Itanagar. Major language(s): English plus many indigenous languages.

### Geography and identity

India's northeastern frontier state with Himalayan terrain, forests, valleys and diverse tribal cultures.

### Important places

Tawang, Ziro, Bomdila

### Economy

Horticulture, hydropower, tourism, handicrafts

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 20 — State — Assam

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Dispur. Major language(s): Assamese and others.

### Geography and identity

Brahmaputra valley state known for tea, oil, wildlife and vibrant Assamese culture.

### Important places

Guwahati, Kaziranga, Majuli

### Economy

Tea, petroleum, agriculture, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 21 — State — Bihar

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Patna. Major language(s): Hindi and regional languages.

### Geography and identity

Historic heartland of ancient Magadha, Buddhism and major river plains.

### Important places

Bodh Gaya, Nalanda, Patna

### Economy

Agriculture, food processing, services

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 22 — State — Chhattisgarh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Raipur. Major language(s): Hindi and Chhattisgarhi.

### Geography and identity

Central Indian state with forests, mineral resources, tribal cultures and major steel industries.

### Important places

Bastar, Jagdalpur, Raipur

### Economy

Steel, coal, power, agriculture, forest products

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 23 — State — Goa

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Panaji. Major language(s): Konkani.

### Geography and identity

Small western coastal state famous for beaches, Portuguese heritage and tourism.

### Important places

Panaji, Old Goa, beaches

### Economy

Tourism, services, mining, fisheries

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 24 — State — Gujarat

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Gandhinagar. Major language(s): Gujarati.

### Geography and identity

Western state with major ports, industrial corridors, textiles and distinctive cultural heritage.

### Important places

Ahmedabad, Kutch, Gir

### Economy

Petrochemicals, engineering, textiles, ports

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 25 — State — Haryana

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Chandigarh. Major language(s): Hindi.

### Geography and identity

Agriculturally productive state surrounding the National Capital Region and known for sports and manufacturing.

### Important places

Gurugram, Kurukshetra, Panipat

### Economy

Agriculture, automobiles, IT, manufacturing

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 26 — State — Himachal Pradesh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Shimla. Major language(s): Hindi and Pahari languages.

### Geography and identity

Mountain state with apple orchards, forests, hydropower and tourism.

### Important places

Shimla, Manali, Dharamshala

### Economy

Horticulture, tourism, hydropower

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 27 — State — Jharkhand

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Ranchi. Major language(s): Hindi plus many regional/tribal languages.

### Geography and identity

Mineral-rich eastern state with forests, waterfalls and strong tribal heritage.

### Important places

Ranchi, Jamshedpur, Deoghar

### Economy

Coal, steel, minerals, power

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 28 — State — Karnataka

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Bengaluru. Major language(s): Kannada.

### Geography and identity

Major technology and manufacturing centre with diverse landscapes and historic sites.

### Important places

Bengaluru, Mysuru, Hampi

### Economy

IT, aerospace, biotechnology, coffee, manufacturing

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 29 — State — Kerala

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Thiruvananthapuram. Major language(s): Malayalam.

### Geography and identity

Southwestern coastal state known for high literacy, backwaters, healthcare, tourism and spice traditions.

### Important places

Kochi, Alappuzha, Munnar

### Economy

Services, tourism, spices, remittances

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 30 — State — Madhya Pradesh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Bhopal. Major language(s): Hindi.

### Geography and identity

Large central state with forests, wildlife, historic monuments and major agricultural regions.

### Important places

Khajuraho, Sanchi, Ujjain

### Economy

Agriculture, mining, manufacturing, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 31 — State — Maharashtra

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Mumbai. Major language(s): Marathi.

### Geography and identity

Major financial, industrial and cultural centre with extensive coastline and large urban population.

### Important places

Mumbai, Pune, Nashik, Aurangabad region

### Economy

Finance, automobiles, IT, manufacturing, films

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 32 — State — Manipur

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Imphal. Major language(s): Meitei and others.

### Geography and identity

Northeastern state known for Loktak Lake, classical dance and diverse communities.

### Important places

Imphal, Loktak

### Economy

Handloom, agriculture, sports, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 33 — State — Meghalaya

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Shillong. Major language(s): English, Khasi, Garo.

### Geography and identity

Hill state known for rainfall, caves, forests, waterfalls and living indigenous cultures.

### Important places

Shillong, Sohra, Dawki

### Economy

Tourism, horticulture, coal/minerals

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 34 — State — Mizoram

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Aizawl. Major language(s): Mizo and English.

### Geography and identity

Hilly northeastern state with bamboo resources, forests and strong community traditions.

### Important places

Aizawl, Champhai

### Economy

Bamboo, horticulture, handloom, services

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 35 — State — Nagaland

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Kohima. Major language(s): English plus Naga languages.

### Geography and identity

Northeastern hill state known for tribal diversity and the Hornbill Festival.

### Important places

Kohima, Dimapur

### Economy

Agriculture, horticulture, tourism, handicrafts

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 36 — State — Odisha

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Bhubaneswar. Major language(s): Odia.

### Geography and identity

Eastern coastal state famous for temples, classical dance, crafts and mineral resources.

### Important places

Puri, Konark, Bhubaneswar

### Economy

Mining, steel, ports, agriculture, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 37 — State — Punjab

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Chandigarh. Major language(s): Punjabi.

### Geography and identity

Fertile northwestern state central to India's Green Revolution and Sikh heritage.

### Important places

Amritsar, Ludhiana, Patiala

### Economy

Agriculture, food processing, textiles, sports

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 38 — State — Rajasthan

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Jaipur. Major language(s): Hindi/Rajasthani languages.

### Geography and identity

India's largest state by area, famous for deserts, forts, palaces and colourful folk traditions.

### Important places

Jaipur, Jodhpur, Udaipur, Jaisalmer

### Economy

Tourism, minerals, textiles, handicrafts

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 39 — State — Sikkim

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Gangtok. Major language(s): Nepali, English and others.

### Geography and identity

Himalayan state known for mountains, monasteries, biodiversity and organic farming initiatives.

### Important places

Gangtok, Pelling, Tsomgo Lake

### Economy

Tourism, horticulture, hydropower

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 40 — State — Tamil Nadu

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Chennai. Major language(s): Tamil.

### Geography and identity

Major southern industrial and cultural state with ancient temple architecture and extensive coastline.

### Important places

Chennai, Madurai, Ooty, Mamallapuram

### Economy

Automobiles, electronics, textiles, IT, ports

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 41 — State — Telangana

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Hyderabad. Major language(s): Telugu and Urdu.

### Geography and identity

Deccan state centred on Hyderabad, a major technology, pharmaceutical and business hub.

### Important places

Hyderabad, Warangal

### Economy

IT, pharma, aerospace, services

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 42 — State — Tripura

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Agartala. Major language(s): Bengali, Kokborok.

### Geography and identity

Northeastern state with forests, bamboo traditions and royal heritage.

### Important places

Agartala, Unakoti

### Economy

Agriculture, rubber, bamboo, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 43 — State — Uttar Pradesh

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Lucknow. Major language(s): Hindi and Urdu.

### Geography and identity

India's most populous state, with major historical, religious, agricultural and industrial centres.

### Important places

Agra, Varanasi, Lucknow, Prayagraj

### Economy

Agriculture, manufacturing, services, tourism

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 44 — State — Uttarakhand

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Dehradun. Major language(s): Hindi and regional languages.

### Geography and identity

Himalayan state known for pilgrimage, forests, rivers and adventure tourism.

### Important places

Dehradun, Rishikesh, Nainital, Kedarnath region

### Economy

Tourism, hydropower, horticulture

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 45 — State — West Bengal

A state profile should be studied through capital, language, geography, economy and culture.

### Capital and language

Capital: Kolkata. Major language(s): Bengali.

### Geography and identity

Eastern state spanning Himalayas to the Sundarbans, with major literary, cultural and industrial traditions.

### Important places

Kolkata, Darjeeling, Sundarbans

### Economy

Services, tea, agriculture, manufacturing, ports

**Quick revision: Capital and language • Geography and identity • Important places • Economy**

## 46 — Union Territory — Andaman & Nicobar Islands

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Sri Vijaya Puram

### **Identity**

Island territory with tropical forests, coral reefs, marine biodiversity and strategic maritime importance.

### **Important places**

Port Blair/Sri Vijaya Puram, Cellular Jail, Havelock/Swaraj Dweep

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 47 — Union Territory — Chandigarh

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Chandigarh

### **Identity**

Planned city and Union Territory; shared capital of Punjab and Haryana.

### **Important places**

Capitol Complex, Rock Garden, Sukhna Lake

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 48 — Union Territory — Dadra & Nagar Haveli and Daman & Diu

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Daman

### **Identity**

Western coastal UT with Portuguese heritage and industrial areas.

### **Important places**

Daman, Diu, Silvassa

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 49 — Union Territory — Delhi (NCT)

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

New Delhi

### **Identity**

National capital territory and major political, cultural, educational and commercial centre.

### **Important places**

Red Fort, India Gate, Qutub Minar, Parliament area

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 50 — Union Territory — Jammu & Kashmir

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Srinagar (summer), Jammu (winter)

### **Identity**

Himalayan UT known for valleys, lakes, mountains and distinctive cultures.

### **Important places**

Srinagar, Gulmarg, Pahalgam, Jammu

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 51 — Union Territory — Ladakh

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Leh

### **Identity**

High-altitude Himalayan UT with dramatic landscapes, monasteries and unique cold-desert ecology.

### **Important places**

Leh, Nubra, Pangong, Kargil

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 52 — Union Territory — Lakshadweep

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Kavaratti

### **Identity**

Coral-island UT in the Arabian Sea with lagoons and marine ecosystems.

### **Important places**

Kavaratti, Agatti, Bangaram

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 53 — Union Territory — Puducherry

Union Territories have distinctive administrative, geographical and cultural characteristics.

### **Administrative centre**

Puducherry

### **Identity**

Coastal UT with French colonial heritage and Tamil cultural influence.

### **Important places**

Puducherry town, Auroville nearby

### **Study angle**

Remember the territory's location, one important landmark, its environmental setting and one major economic activity.

**Quick revision: Administrative centre • Identity • Important places • Study angle**

## 54 — 19. Prehistory

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Stone Age communities left tools, rock art and archaeological evidence across the subcontinent. Early farming and settled communities developed in several regions.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 55 — 24. Mauryan Empire

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Chandragupta Maurya established a large empire. Ashoka later became famous for inscriptions, governance and patronage of Buddhism.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 56 — 25. Gupta Period

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

The Gupta era is associated with developments in mathematics, astronomy, Sanskrit literature, sculpture and political consolidation.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 57 — 26. Southern Kingdoms

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Cholas, Cheras and Pandyas developed powerful states and maritime trade networks. Temple architecture and Tamil literature flourished.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 58 — 27. Delhi Sultanate

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Successive dynasties ruled large parts of northern India from Delhi, producing new administrative, architectural and cultural forms.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 59 — 28. Vijayanagara

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Vijayanagara became a major southern empire. Hampi remains an important archaeological and cultural landscape.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 60 — 29. Mughal Empire

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Founded by Babur in 1526. Akbar expanded the empire and developed administrative and cultural institutions. Mughal architecture became globally influential.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 61 — 30. Marathas & Regional Powers

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Maratha power expanded in the 17th–18th centuries, while Rajputs, Sikhs, Mysore, Ahoms and many other states shaped regional politics.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 62 — 31. Trade & Cultural Exchange

Ancient and medieval India developed through overlapping kingdoms, economies, religions, technologies and cultural traditions.

### Main topic

Indian Ocean trade connected Indian ports with Arabia, East Africa, Southeast Asia and beyond, spreading goods, languages, religions and artistic ideas.

### Historical method

Use archaeological evidence, inscriptions, literature and material culture together rather than relying on a single source.

### Regional perspective

Political control varied by region, so the same period could look very different in different parts of India.

### Revision

Remember one ruler or institution, one cultural development and one geographical centre.

**Quick revision: Main topic • Historical method • Regional perspective • Revision**

## 63 — 35. Revolt of 1857

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

A major uprising involving soldiers, rulers, peasants and civilians. It was suppressed, after which governance passed to the British Crown.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 64 — 36. Indian National Congress

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Founded in 1885. Over time it developed from an elite political platform into a mass nationalist organisation.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 65 — 37. Swadeshi Movement

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

The 1905 partition of Bengal triggered boycott, indigenous industry and political mobilisation.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 66 — 38. Gandhi's Mass Movements

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Non-Cooperation, Civil Disobedience and Quit India mobilised millions and made non-violent resistance a central feature of the freedom struggle.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 67 — 39. Revolutionary Nationalism

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Revolutionary groups and leaders used underground organising and armed resistance. Their activities influenced nationalist politics.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 68 — 40. Subhas Chandra Bose

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Bose led the Indian National Army and sought international support for India's independence.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 69 — 41. Women in the Freedom Struggle

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Women participated as organisers, protesters, revolutionaries, political leaders and social reformers.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 70 — 42. Tribal & Peasant Movements

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

Numerous local movements opposed colonial land, forest, tax and labour policies. Their history is essential to understanding India's independence.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 71 — 43. Independence & Partition

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

India became independent on 15 August 1947. Partition caused mass migration, violence and long-term political consequences.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 72 — 44. Integration of Princely States

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

After independence, hundreds of princely states were integrated into the Indian Union through political negotiation and, in some cases, military action.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 73 — 45. Constitution & Republic

Modern Indian history is best understood through colonial institutions, economic change and the growth of mass nationalism.

### Main topic

The Constitution was adopted in 1949 and came into force on 26 January 1950, establishing the Republic of India.

### Cause and effect

Identify the political or economic cause, the event itself and the longer-term consequence.

### People

National movements included leaders, workers, peasants, students, women and regional organisations.

### Revision

Build a timeline and connect each event to the next major development.

**Quick revision: Main topic • Cause and effect • People • Revision**

## 74 — 49. Directive Principles

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

These guide the state toward social and economic welfare, public health, education, equitable distribution and other goals.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 75 — 50. Fundamental Duties

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

Article 51A lists duties of citizens, including respect for the Constitution, national symbols, environmental protection and scientific temper.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 76 — 51. Parliament

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

Parliament consists of the President and two Houses: Lok Sabha and Rajya Sabha. The Lok Sabha is the directly elected lower House.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 77 — 52. Executive

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

The President is the constitutional head; the Prime Minister leads the Council of Ministers. The Union executive operates under the Constitution.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 78 — 53. Judiciary

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

The Supreme Court is the highest court. High Courts serve states/UTs and subordinate courts form the wider judicial system.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 79 — 54. Election Commission

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

The Election Commission administers elections to Parliament, state legislatures and the offices of President and Vice-President under its constitutional mandate. [\[cite\turn0search2\]](#)

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 80 — 55. State Government

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

States generally have a Governor, Chief Minister, Council of Ministers and Legislative Assembly; some states have bicameral legislatures.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 81 — 56. Local Government

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

Panchayats and municipalities provide local governance. Constitutional amendments strengthened local democratic institutions.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 82 — 57. Emergency Provisions

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

The Constitution provides national, state and financial emergency frameworks with specified constitutional conditions and procedures.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 83 — 58. Constitutional Bodies

India's constitutional system distributes authority among institutions and levels of government.

### Main topic

Examples include the Election Commission, CAG, UPSC, Finance Commission and other institutions created by the Constitution or law.

### Institutional link

Parliament makes laws, the executive administers policy and the judiciary interprets law within constitutional limits.

### Citizen link

Rights, duties, elections and local government connect constitutional ideas to everyday life.

### Revision

For each institution remember: composition, main function and accountability mechanism.

**Quick revision: Main topic • Institutional link • Citizen link • Revision**

## 84 — Economy — GDP and Growth

GDP measures the value of final goods and services produced in an economy.

### Sectors

Agriculture, industry and services contribute in different ways to output and employment.

### Real versus nominal

Real measures adjust for price changes, while nominal values use current prices.

### Growth

Economic growth means an increase in output over time; development also includes health, education and living standards.

### Regional differences

Growth rates and income levels vary substantially across Indian states.

**Quick revision: Sectors • Real versus nominal • Growth • Regional differences**

## 85 — Economy — Inflation

Inflation means a sustained rise in the general price level.

### Consumers

High inflation reduces purchasing power when incomes do not rise as quickly.

### Causes

Demand, supply disruptions, energy prices, food conditions and monetary factors can all matter.

### RBI role

Monetary policy is one tool used to influence inflation and financial conditions.

### Households

Food and fuel prices can have a particularly visible effect on household budgets.

**Quick revision: Consumers • Causes • RBI role • Households**

## 86 — Economy — Banking and Financial Inclusion

Banking connects savings with investment and makes payments and credit possible.

### **Deposits**

Banks accept deposits and provide services for households and businesses.

### **Credit**

Loans support homes, education, agriculture, vehicles and business investment.

### **Inclusion**

Financial inclusion seeks to bring affordable accounts and payment services to underserved communities.

### **Digital finance**

Mobile banking, UPI and other digital systems have expanded access and speed.

**Quick revision: Deposits • Credit • Inclusion • Digital finance**

## 87 — Economy — Agriculture and Food Security

Agriculture remains central to food supply and rural livelihoods.

### Crops

Rice, wheat, pulses, oilseeds, cotton, sugarcane, fruits, vegetables, tea, coffee and spices are important.

### Seasons

Kharif, Rabi and Zaid refer broadly to different agricultural seasons.

### Risks

Rainfall variability, heat, pests, water stress and market volatility affect farmers.

### Value chains

Storage, processing, transport and marketing can raise the value of farm output.

**Quick revision: Crops • Seasons • Risks • Value chains**

## 88 — Economy — Industry and Manufacturing

Manufacturing turns raw materials, labour and technology into products.

### Major industries

Steel, automobiles, chemicals, textiles, pharmaceuticals, electronics and food processing are important.

### Clusters

Industries often concentrate where skills, suppliers, transport and markets are available.

### MSMEs

Micro, small and medium enterprises contribute to employment and local supply chains.

### Technology

Automation, digital manufacturing and quality systems increasingly shape competitiveness.

**Quick revision: Major industries • Clusters • MSMEs • Technology**

## 89 — Economy — Infrastructure and Logistics

Infrastructure determines how efficiently goods, people, energy and information move.

### **Rail**

Railways move both passengers and freight.

### **Road**

Highways and expressways connect cities, ports and industrial centres.

### **Ports and airports**

Maritime and air infrastructure connect India to domestic and global markets.

### **Digital layer**

Telecom and digital platforms increasingly complement physical logistics.

**Quick revision: Rail • Road • Ports and airports • Digital layer**

## 90 — Science — ISRO

India's space programme combines practical applications with scientific exploration.

### Satellites

Communication, weather, navigation and Earth-observation satellites support everyday services.

### Launchers

PSLV has been a major workhorse; GSLV-class systems support heavier missions.

### Applications

Space data supports agriculture, mapping, disaster response and environmental monitoring.

### Human capital

Space missions require expertise in propulsion, electronics, software, materials and systems engineering.

**Quick revision: Satellites • Launchers • Applications • Human capital**

## 91 — Science — Chandrayaan

India's lunar programme progressed from mapping to successful soft-landing capability.

### **Chandrayaan-1**

The first lunar mission produced important mapping and mineralogical observations.

### **Chandrayaan-2**

Its orbiter continued lunar observations after the lander experienced difficulties.

### **Chandrayaan-3**

The mission achieved a successful soft landing and rover operations in 2023.

### **Importance**

Landing missions require precise navigation, hazard avoidance, propulsion and communications.

**Quick revision: Chandrayaan-1 • Chandrayaan-2 • Chandrayaan-3 • Importance**

## 92 — Science — Mangalyaan and Aditya-L1

India has demonstrated interplanetary and solar observation capability.

### **Mars Orbiter Mission**

Mangalyaan entered Mars orbit in 2014 and demonstrated deep-space mission capability.

### **Aditya-L1**

The solar observatory studies the Sun from a halo orbit around the Sun-Earth L1 region.

### **Engineering**

Deep-space missions require accurate navigation, power, communication and thermal control.

### **Science value**

The missions produce observations while strengthening national space engineering capability.

**Quick revision: Mars Orbiter Mission • Aditya-L1 • Engineering • Science value**

## 93 — Science — Indian Scientists

Indian scientific history spans mathematics, physics, space and nuclear research.

### **Aryabhata**

Aryabhata contributed to mathematics and astronomy.

### **Brahmagupta**

Brahmagupta made influential contributions to arithmetic, algebra and astronomy.

### **C. V. Raman**

Raman's work on light scattering earned the Nobel Prize in Physics.

### **Space pioneers**

Vikram Sarabhai and A. P. J. Abdul Kalam were important figures in India's modern scientific programmes.

**Quick revision: Aryabhata • Brahmagupta • C. V. Raman • Space pioneers**

## 94 — Science — AI and Digital India

India's technology ecosystem combines public digital infrastructure, startups and research.

### AI uses

AI is used in language tools, finance, agriculture, healthcare and industry.

### Digital identity

Digital identity infrastructure supports many online services.

### Payments

UPI enables interoperable instant account-to-account payments.

### Future fields

Semiconductors, quantum technology, robotics and biotechnology are strategic areas.

**Quick revision: AI uses • Digital identity • Payments • Future fields**

## 95 — Defence — Armed Forces

India's defence system includes Army, Navy and Air Force capabilities.

### **Army**

The Army's primary role is territorial defence and land operations.

### **Navy**

The Navy protects maritime interests and sea lanes.

### **Air Force**

The Air Force provides air defence, mobility, surveillance and combat capabilities.

### **Joint operations**

Modern operations increasingly integrate land, sea, air, space, cyber and information capabilities.

**Quick revision: Army • Navy • Air Force • Joint operations**

## 96 — Defence — DRDO and Coast Guard

Defence research and maritime security support national resilience.

### **DRDO**

DRDO develops missiles, sensors, electronics, vehicles and other defence technologies.

### **Coast Guard**

The Coast Guard handles maritime law enforcement, search and rescue, pollution response and coastal security.

### **Indigenisation**

Domestic production aims to strengthen supply security and technological capability.

### **Disaster support**

Security organisations can provide evacuation, transport and emergency logistics during disasters.

**Quick revision: DRDO • Coast Guard • Indigenisation • Disaster support**

## 97 — Environment — Biodiversity

India contains forests, grasslands, deserts, wetlands, mountains, mangroves and coral ecosystems.

### **Tiger**

Project Tiger began in 1973 and became a major conservation programme.

### **Lion and rhino**

The Asiatic lion is concentrated in Gujarat; Assam is especially important for the one-horned rhinoceros.

### **Protected areas**

National parks, sanctuaries and other conservation landscapes protect habitats.

### **Threats**

Habitat fragmentation, pollution, invasive species and human-wildlife conflict are major pressures.

**Quick revision: Tiger • Lion and rhino • Protected areas • Threats**

## 98 — Environment — Climate Change

Climate risks affect cities, farms, forests, coasts and water resources.

### Heat

Heatwaves can affect health, labour productivity and electricity demand.

### Water

Droughts, floods, groundwater stress and changing rainfall patterns create different regional risks.

### Coasts

Mangroves, reefs and wetlands provide important ecological functions and some coastal protection.

### Response

Renewable energy, efficiency, resilient agriculture, public transport and ecosystem restoration are important responses.

**Quick revision: Heat • Water • Coasts • Response**
